

DSW600 DIGITAL ACTIVE IN-WALL SUBWOOFER FAST, DYNAMIC & POWERFUL

The DSW600 is a shallow-depth, digital active in-wall subwoofer designed to handle the most bass heavy music and movie soundtracks with ease. Deep, powerful and exciting bass is delivered with perfect timing down to 24Hz thanks to Meridian's unique 'DSP' advantage and Enhanced Bass Alignment Technology.

The DSW600 can integrate into a variety of installation applications, it delivers impactful bass in any room size and as part of any loudspeaker configuration; it can be used to augment the bass from other loudspeakers in both two-channel and surround-sound systems, and it can be used to play the dedicated LFE channel - either on its own or when used in multiples.

THE DSW600 AT A GLANCE

Featuring Meridian's Enhanced Bass Alignment (EBA) technology, perfect bass alignment for fast, tight, deep, accurate bass and seamless system integration.

Built-in music and movie modes to tailor bass performance.

Immersive, powerful and accurate bass down to 24Hz.

Bass protection provided by on-board DSP prevents the subwoofer from overdriving even at the most extreme bass levels.

Built-in amplification capable of delivering over 600W of power without taking up space or generating heat in the rack.

Ultra-shallow mounting depth of less than 100mm allows flexibility in installation.

On-board DSP supports partnering with any Meridian Architectural loudspeaker to provide truly full-range performance from a two-box in-wall solution.

Sealed cabinet built from birch plywood with heavy internal bracing, delivers a reliable, repeatable performance regardless of installation.
